

UNIT 1

NUMBER CONCEPTS AND OPERATIONS

1.1 Representing and Describing Whole Numbers

1.2 Using Estimation

1.3 Mental Mathematics for Multiplying

1.4 Multiplying 2-Digit Numbers

1.5 Dividing 2-Digit by 1-Digit Numbers

If you need additional help, there are more resources available at math-help.ca/more

1.1 Representing and Describing Whole Numbers

Word Numbers and Numerals

When we express an amount or quantity using words, we call it a **word number**. Examples include twenty-five and one hundred thirty-two. When we use symbols to represent a quantity, we call it a **numeral**; for example, 25 and 132.

Examples: **Two thousand one hundred fifty-three** **OR** **2153**

 ↑ ↑

WORD NUMBER **NUMERAL**

Writing Word Numbers

When we write a word number to represent a whole number numeral, we don't use the word “and.” This word is reserved later for decimals.

Examples:

1. 138 is written as one hundred thirty-eight **NOT** one hundred and thirty-eight.
2. 4530 is written as four thousand five hundred thirty **NOT** four thousand five hundred and thirty.

Numerals and Digits

Numerals are made up of **digits**. For example, the numeral 356 is made up of the digits **3**, **5**, and **6**. Each one of these digits represents a certain value.

Example: 5368 is made up of the digits **5**, **3**, **6**, and **8**, each with different values.

The **value** of each digit depends on its location or **place** in the numeral. For example, in the numeral 235, the digit 2 has a value of 200 because it is in the hundreds place, the digit 3 has a value of 30 because it is in the tens place, and the digit 5 has a value of 5 because it is in the ones place.

Using Proper Spacing Instead of Commas in Numerals

In Canada, we do not use commas with whole numbers. When a numeral has more than 4 digits, we leave a space instead of a comma between every three digits, working from right to left. We do **not** use a comma or leave a space if there are only four digits.

Examples:

- | | |
|------------------------------------|--|
| 1. Use 35 172 instead of 35,172. | Leave a space with three digits to the right. |
| 2. Use 534 873 instead of 534,873. | Leave a space with three digits to the right. |
| 3. Use 4215 instead of 4,215. | Since there are only 4 digits, do not leave a space. |

Examples with Solutions

1. Write a numeral for each of the following word numbers.

- | | |
|--|--------|
| a. two hundred fifty-three | 253 |
| b. one hundred twenty | 120 |
| c. three thousand four hundred seventy | 3470 |
| d. six thousand fifty-seven | 6057 |
| e. five thousand six hundred two | 5602 |
| f. fifty thousand three hundred six | 50 306 |

2. Write a word number for each of the following numerals.

- | | |
|-----------|---|
| a. 509 | five hundred nine |
| b. 3238 | three thousand two hundred thirty-eight |
| c. 4044 | four thousand forty-four |
| d. 6305 | six thousand three hundred five |
| e. 8230 | eight thousand two hundred thirty |
| f. 41 206 | forty-one thousand two hundred six |

3. Write as many different numerals as possible from the following digits.

7, 3

Possible numerals with one digit are 3 and 7.

Possible numerals with two digits are 37 and 73.

All possible numerals are: 3, 7, 37, 73.

4. Use proper spacing and delete commas to rewrite each numeral shown incorrectly on the left.

Incorrectly Written Numeral

Correct Version

- | | |
|------------|--------------------------------------|
| a. 4,678 | 4678 (remove comma, no space) |
| b. 7 349 | 7349 (remove space) |
| c. 10,348 | 10 348 (remove comma, insert space) |
| d. 72,431 | 72 431 (remove comma, insert space) |
| e. 145,689 | 145 689 (remove comma, insert space) |

Place Value

When we write numerals from 0 to 9, they involve only the “**ones**” digits.

Examples:

1. 9 is equal to nine ones.
2. 2 is equal to two ones.

When we write numerals from 10 to 99, they involve both “**tens**” and “**ones**” digits.

Examples:

1. 16 is equal to 1 ten and 6 ones.
2. 68 is equal to 6 tens and 8 ones.

When we write numerals between 100 and 999, they involve **hundreds**, **tens**, and **ones** digits.

Example: 962 is equal to 9 hundreds, 6 tens, and 2 ones.

Numerals between 1000 and 99 999 can include the “**ten thousands**, **thousands**, **hundreds**, **tens**, and **ones**” digits. The number 23 417 is shown below with the place value for each digit.

2	3	4	1	7
↑	↑	↑	↑	↑
ten	thousands	hundreds	tens	ones
thousands				

So 23 417 has 2 ten thousands, 3 thousands, 4 hundreds, 1 ten, and 7 ones
(twenty-three thousand four hundred seventeen)

↑
Combine the thousands.

↑
Combine the tens and ones.

Examples with Solutions

1. What is the value of the underlined digit in each of the following numerals?

- a. 453 The digit 5 is in the tens place, so it is equal to $5 \times 10 = 50$.
- b. 682 The digit 2 is in the ones place, so it is equal to $2 \times 1 = 2$.
- c. 509 The digit 5 is in the hundreds place, so it is equal to $5 \times 100 = 500$.
- d. 2345 The digit 3 is in the hundreds place, so it is equal to $3 \times 100 = 300$.
- e. 5230 The digit 5 is in the thousands place, so it is equal to $5 \times 1000 = 5000$.
- f. 54 895 The digit 4 is in the thousands place, so it is equal to $4 \times 1000 = 4000$.
- g. 24 305 The digit 2 is in the ten thousands place, so it is equal to
 $2 \times 10\,000 = 20\,000$.

2. Write each numeral described below.

- a. I have 5 tens, 4 hundreds, and 3 ones. 453
- b. I have 2 thousands, 3 hundreds and 7 ones. 2307
- c. I have 9 hundreds, 7 thousands, and 8 ones. 7908
- d. I have 6 ten thousands and 2 hundreds. 60 200
- e. I have 3 ten thousands, 1 thousand, and 5 tens. 31 050
- f. I have 6 thousands and 3 ones. 6003
- g. I have 3 hundreds and 7 thousands. 7300

3. Write each numeral as a word number.

- a. 25 040 Twenty-five thousand forty
- b. 620 305 six hundred twenty thousand three hundred five
- c. 702 027 seven hundred two thousand twenty-seven
- d. 800 808 eight hundred thousand eight hundred eight

4. Write each word number as a numeral.

- a. three hundred twenty-five thousand two hundred nine 325 209
- b. one hundred twenty-five thousand six hundred forty-eight 125 648
- c. two hundred thousand three hundred ten 200 310
- d. six hundred thousand thirty-five 600 035

Expressing a Numeral using Expanded Form

We can show a numeral as a sum of the values of its digits. This is called writing the numeral in **expanded form**. For example, 526 is equal to $500 + 20 + 6$. Keep in mind the place values of the digits.

Examples:

- $34 = 3 \times 10 + 4 \times 1 = 30 + 4$
- $793 = 7 \times 100 + 9 \times 10 + 3 \times 1 = 700 + 90 + 3$
- $8408 = 8 \times 1000 + 4 \times 100 + 0 \times 10 + 8 \times 1 = 8000 + 400 + 8$

Examples with Solutions

1. Write each numeral in expanded form.

a. 5642

$$5642 = 5 \times 1000 + 6 \times 100 + 4 \times 10 + 2 \times 1$$

b. 4059

$$4059 = 4 \times 1000 + 5 \times 10 + 9 \times 1$$

c. 24 040

$$24\,040 = 2 \times 10\,000 + 4 \times 1000 + 4 \times 10$$

2. Write the numeral that has 5 thousands, 2 hundreds, 3 tens, and 0 ones.

$$\underline{5} \times 1000 + \underline{2} \times 100 + \underline{3} \times 10 + \underline{0} \times 1 \\ = 5000 + 200 + 30 + 0 = 5230$$

3. Write the word number for the numeral **7215**.

The numeral has 7 thousands, 2 hundreds, 1 ten, and 5 ones.

The word number is **seven thousand two hundred fifteen**.

4. Write 30 574 in words.

The numeral has 3 ten thousands, 5 hundreds, 7 tens, and 4 ones.

The word number is **thirty thousand five hundred seventy-four**.

5. Write three hundred thousand five hundred twenty as a numeral.

There are 3 hundred thousands, 5 hundreds, and 2 tens.

The numeral is **300 520**.

6. In the numeral 70 218,

a. What is the value of the 2?

The 2 is in the hundreds column, so its value is $2 \times 100 = 200$.

b. What is the value of the 1?

The one is in the tens column, so its value is $1 \times 10 = 10$.

c. What is the value of the 7?

The 7 is in the ten thousands column, so its value is $7 \times 10\,000 = 70\,000$.

Exercises 1.1

1. Write a numeral for each of the following word numbers.

a. one hundred seventy

b. five hundred nine

c. four hundred twenty-four

d. six thousand fifteen

e. two thousand thirty-six

f. twenty-two thousand ten

g. thirty thousand two hundred one

h. two hundred thousand six hundred

2. Write a word number for each of the following numerals.

a. 345

b. 304

c. 1250

d. 2253

e. 32 753

f. 70 150

g. 125 344

h. 333 303

3. Write as many different numerals as possible from the following digits.

a. 5, 2

b. 1, 7

4. Rewrite each numeral using proper spacing and deleting commas.

a. 4 790

b. 7,666

c. 5,555

d. 12,456

e. 30,148

f. 22,088

g. 470,031

h. 330,022

5. Fill in each blank with the correct digit in the table below.

	ten thousands	thousands	hundreds	tens	ones
a. 405					
b. 2210					
c. 6070					
d. 5055					
e. 20 245					
f. 31 042					
g. 78 103					

6. Write each numeral using expanded notation.

a. 4522

b. 3022

c. 40 250

d. 12 090

e. 38 0 80

f. 120 790

7. Write each numeral described below.

a. I have 3 thousands, 2 tens, and 7 ones.

b. I have 6 hundreds and 9 ones.

c. I have 2 ten thousands, 3 hundreds, 5 tens, and 2 ones.

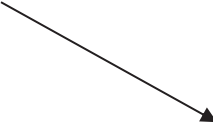

d. I have 8 thousands, 3 tens, and 5 ones.

8. What is the value of the digit underlined in each numeral?

a. 5671b. 6092

c. $\underline{6}3\ 697$ d. $\underline{5}4\ 207$

9. Draw an arrow to match the numeral on the left with the correct word number on the right. The first one is done for you.

- a. $125\ 430$  nine hundred eight thousand eight
- b. $750\ 209$ one hundred twenty-five thousand four hundred thirty
- c. $300\ 025$ four hundred ten thousand ten
- d. $908\ 008$ seven hundred fifty thousand two hundred nine
- e. $410\ 010$ three hundred thousand twenty-five
- f. $125\ 043$ three hundred thousand two hundred fifty
- g. $300\ 250$ one hundred twenty-five thousand forty-three

Extra for Experts**WHAT NUMBER AM I?**

10. I have 3 thousands, 2 hundreds, 0 tens, and 2 ones.
11. I have 2 hundreds, three times as many tens as hundreds, and half as many ones as hundreds.
12. I have 15 ones and 9 tens.
13. I have 30 tens and 2 ones.

14. I have 14 hundreds, 6 tens, and 18 ones.
15. I have twice as many thousands as tens, twice as many tens as ones, and 2 less than 4 ones.
16. I have 6 thousands, half as many hundreds as thousands, and the same number of tens and ones as hundreds.
17. I have the same number of thousands, hundreds, tens, and ones. The sum of my digits is 28.
18. List all of the 3-digit numerals that can be made from the digits 3, 6, and 9.
19. List all of the numerals containing one, two, or three digits that can be made from the digits 5, 2, and 3.

ABORIGINAL APPLICATIONS

THE SALMON

Artist: T. Isaac

The Salmon is an extremely important part of the lifestyle and culture of Coastal First Nations people. Its importance as a food source and its impact on the way of life of Aboriginals gives the Salmon a position of special honour and respect.

Through different methods of preserving food, such as smoking, canning, and drying, the Salmon provides food throughout the year. The Salmon is an important figure in special gatherings and artwork, and it serves as a symbol of renewal and prosperity.

Math Applications

1. If 22 salmon each had a mass (weight) of 4 kg. What would their total mass (weight) be in kilograms?
2. A bin of salmon at a cannery had a total mass of 132 kg. If each salmon had a mass of 6 kg, how many salmon were in the bin?

Answers

1. $22 \times 4 = 88$

The total mass would be 88 kg.

2. $132 \div 6 = 22$

There were 22 salmon in the bin.
